Ingmar Bergman Newnes
 Ingmar Bergman, an undisputed giant of modern cinematic art, here talks frankly and extensively about himself and his films. This discussion with the great Swedish director ranges from Bergman's childhood memories to his admiration for Strindberg to his relationship with the stars whom he made famous - Liv Ullmann, Harriet Andersson, Max von Sydow and Bibi Andersson, among others. Originally published in 1973, this work covers Bergman's career from his early films through the works: *The Seventh Seal*, *Wild Strawberries*, *Persona*, *The Passion of Anna*.

The Transplanted World Scientific
 The study of Old Norse Religion is a truly multidisciplinary and international field of research. The rituals, myths and narratives of pre-Christian Scandinavia are investigated and interpreted by archaeologists, historians, art historians, historians of religion as well as scholars of literature, onomastics and Scandinavian studies. For obvious reasons, these studies belong to the main curricula in Scandinavia but are also carried out at many other universities in Europe, the United States and Australia a fact that is evident to any reader of this book. In order to bring this broad and varied field of research together, an international conference on Old Norse religion was held in Lund in June 2004. About two hundred delegates from more than fifteen countries took part. The intention was to gather researchers to encourage and improve scholarly exchange and dialogue, and Old Norse religion in long-term perspectives presents a selection of the proceedings

from that conference. The 75 contributions elucidate topics such as worldview and cosmology, ritual and religious practice, myth and memory as well as the reception and present-day use of Old Norse religion. The main editors of this volume have directed the multidisciplinary research project *Roads to Midgard* since 2000. The project is based at Lund University and funded by the Bank of Sweden Tercentenary Foundation.

Ingmar Bergman is worldwide known as a film and stage director. Yet no-one has attempted to compare his stage and screen activities. In *Between Stage and Screen* Egil Törnqvist examines formal and thematic correspondences and differences between a number of Bergman's stage, screen, and radio productions. In the prologue Bergman's spiritual and aesthetic heritage and his position in the twentieth century media landscape is outlined. In the epilogue the question is answered to what extent one can speak of Bergman's directorial 'method' irrespective of the chosen medium.

Autumn Escapade Ulverscroft
 This book brings Einstein's general relativity into action in new ways at scales ranging from the tiny Planck scale to the scale of immense galactic clusters. It presents the case that Einstein's theory of gravity can describe the observed dynamics of galaxies without invoking the unknown OC dark matterOCO required in models based on Newtonian gravity. Drawing on the author's experience as a lecturer and on his own research, the book covers the essentials of Einstein's special and general relativity at a level accessible to undergraduate students. The early chapters provide a compact introduction to relativity for readers who have little or no background in the subject. Hermann Bondi's very transparent approach to special relativity is expanded to resolve the OC twin paradoxOCO using only elementary mathematics. In later chapters, general relativity is used to extend the concept of the Planck scale, to address the role of the cosmological term and to analyze the concept of OC time machinesOCO.

 John Ashbery's most renowned collection of poetry -- Winner of The Pulitzer Prize, the National Book Award, and the National Book Critics Circle Award First released in 1975, *Self-Portrait in a Convex Mirror* is today regarded as one of the most important collections of poetry published in the last fifty years. Not only in the title poem, which the critic John Russell called "one of the finest long poems of our period," but throughout the entire volume, Ashbery reaffirms the poetic power that made him an outstanding figure in contemporary literature. These are poems "of breathtaking freshness and adventure in which dazzling orchestrations of language open up whole areas of consciousness no other American poet as ever begun to explore" (The New York Times).

dissatisfied? The clothes, the house, the Poggenpohl kitchen do nothing to give her life meaning. The death of a friend makes her question her existence still further. The Holy Bible

"Historians of migration will welcome Mark Wyman's new book on the elusive subject of persons who returned to Europe after coming to the United States. Other scholars have dealt with particular national groups . . . but Wyman is the first to treat . . . every major group . . . Wyman explains returning to Europe as not just the fulfillment of original intentions but also the result of 'anger at bosses and clocks, nostalgia for waiting families,' nativist resentment and heavy-handed Americanization programs,

and a complex of other problems. . . . Wyman's 'nine broad conclusions' about the returnees deserve to be read by everyone concerned with international migration."--Journal of American History

This IBM® Redbooks® publication describes important networking concepts and industry standards that are used to support high availability on IBM System z®. Some of the networking standards described here are VLANs, VLAN trunking, link aggregation, virtual switches, VNICs, and load-balancing. We examine the various aspects of network setups and introduce the main Linux on System z networking commands and configuration files. We describe the management of network interface parameters, assignment of addresses to a network interface, and usage of the ifconfig command to configure network interfaces. We provide an overview of connectivity options available on the System z platform. We also describe high availability concepts

and building a high availability solution using IBM Tivoli® System Automation. We also provide the implementation steps necessary to build a redundant network connections set up between an IBM z/VM® system and the external network switches using two Open Systems Adapter-Express 3 (OSA-Express 3) adapters with 10 Gb Ethernet ports. We describe the tests performed in our lab environment. The objectives of these tests were to gather information about performance and failover from the perspective of a real scenario, where the concepts of described in this book were applied. This book is focused on information that is practical and useful for readers with experience in network analysis and engineering networks, System z and Linux systems administrators, especially for readers that administer networks in their day-to-day activities. For additional reading: A Technote is available that explains changes to using channel bonding interfaces introduced with SLES 11 SP 2.
