The Sten submachine gun - officially the 'Carbine, Machine, Sten' - was developed to fulfill the pressing British need for large quantities of cheaply produced weapons after Dunkirk, when German invasion was a very real possibility. Over four million were built during World War II, and the Sten was widely used by airborne troops, tankers, and others who needed a compact weapon with substantial firepower. It proved especially popular with Resistance fighters as it was easy to conceal, deadly at close range, and could fire captured German ammunition - with a design so simple that Resistance fighters were able to produce them in bicycle shops. Featuring vivid first-hand accounts, specially commissioned full-colour artwork and close-up photographs, this is the fascinating story of the mass-produced submachine gun that provided Allied soldiers and Resistance fighters with devastating close-range firepower.

**The M1 Carbine** Simon and Schuster

In 1938 the US Chief of Infantry requested that the Ordnance Department develop a carbine to be used by service and support troops, artillerymen, machine-gun crews, tankers, mortar crews and other troops not needing the power of the M1 Garand rifle. The development of this new weapon was given an added impetus by Germany's successful use of airborne and glider troops early on in World War II. This caused a fear amongst US officers that troops normally considered 'behind the lines' personnel might have to fight elite German troops and would therefore require a more effective weapon than their standard pistols. The resulting M1 Carbine was a not a shortened version of the standard service rifle but instead a brand-new design chambering a new cartridge. Eventually numerous manufacturers would combine to produce over six million M1 Carbines before the end of the war. This book charts the complete story of the weapon, from its design, to its operational history and its impact upon warfare.
