A&C Black Green Club attempts to overcome the uncertainty of high card point (HCP) range of 12 to 21 for opening at 1 level of a suit in SAYC. It also attempts to enhance the hand valuation method by

adding long point (LP), trump point (TRP), and short point (SP) to the traditional high card point (HCP); resulting in aggregate trick point (TP). Analysis of actual hands played at tournament is provided to support the TP hand valuation method. An open bid will tell the strength of a hand within an accuracy of 3 TP. Shape of a hand is classified into 3 segments namely balance or one suiter, two suiter, and two long suiter. The objective is to tell responder at an early stage of bidding the

strength and shape of a hand for timely and appropriate actions. Unlike the majority of construction project management textbooks out there, *Management of Construction Projects*

takes a distinctive approach by setting itself in the context of a single and real-world construction project throughout and also by looking at construction project management from the constructor's perspective. This project-based learning approach emphasizes the skills, knowledge, and techniques students require to become successful project managers. This second edition uses a brand new, larger, and more challenging case study to

take students through key stages of the process, including: contracts and subcontracting; estimating, scheduling, and planning; supply chain and materials management; cost control, quality, and safety; project leadership and ethics; and claims, disputes, and project close-outs. Also new to this edition is coverage of emergent industry trends such as LEAN, LEED, and BIM. The book contains essential features such as review questions, exercises, and chapter

summaries, while example plans, schedules, contracts, and other documents are stored on a companion website. Written in straightforward language from a constructor's perspective, this textbook gives a realistic overview and review of the roles of project managers and everything they need to know in order to see a successful project through from start to finish.

This work is part of a series designed to suit the specific needs of small building and public works contractors, and the problems that arise from bidding for and carrying out varied and dispersed projects in a context of highly cyclical demand.; This handbook covers pricing and bidding to obtain new projects. Too many contractors produce ""guesstimates""--Not

estimates - of project costs, so they either bid too high and lose the contract, or - often even worse - get the work at a price which is below cost. Besides taking the reader step-by-step through the preparation of the bid on a small b.
